No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                              9416466

```

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MARPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
Mapping information for Genetics, Washington University, St. Louis
MCB-herson, Department of Genetics, Washington University, St. Louis

sequence, see http://genome.wustl.edu/gsc

The RPCI-11 human BAC library was made from the blood of one male The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pleter de Jong and coworkers at the Roswell Park Cancer Institute

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces arbitrary daps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                       Worley, K.C.

Di Francesco V, Beasley EM; WPI; 2002-682698/73. P-PSDB; ABP53556. Yan C, Ketchum KA,

New human phospholipase proteins, useful for the development of human therapeutics and diagnostic compositions, drug screening assays, tissue typing and pharmacogenomic analysis.

Claim 4; Fig 1A; 95pp; English.

The present sequence encodes a human phospholipase protein (I) located on chromosome 2. (I) can be used for identifying agents that modulate its chromosome 2. (I) can be used for identifying agents that modulate its function or activity where the agent is useful for treating a disease or condition mediated by a the human phospholipase protein. (I) peptides can condition mediated by a the human phospholipase protein. (I) peptides can condition mediated by a the human phospholipase protein. (I) peptides can information of the peptide sequences, to raise antibodies or to elicit information of the peptide sequences, to raise antibodies or to elicit immune response, as reagents in assays that determine the levels of protein in biological fluids, and as markers for tissues where the corresponding protein is expressed. Nucleotide sequences encoding (I) can be used as probes, primers and chemical intermediates in biological can be used in the identification of therapeutic proteins and may serve as models or targets for the development of human therapeutic agents that compliants phospholipase activity in cells and tissues that express the phospholipase, such as in kidney, blood, lung, brain glioblastomas, correspondent colon or leukocytes

The present invention relates to novel human lipid-associated molecules (LIPAM) and polynucleotides encoding such proteins. Sequences of the invention are useful for treating diseases or conditions associated with decreased expression of functional LIPAM. The antagonist is useful for treating a disease or condition associated with the overexpression of treating a disease or condition associated with the overexpression of treating a disease (a secondary of the overexpression of the conditional LIPAM. They are useful for diagnosing, treating or preventing cardiovascular disorates (e.g. arteriovenous fistula, atherosclerosis, hypertension, Raynaud's disease, aneuryems, varicose veins, congestive heart failure, thrombophlebitis, angina pectoris, ischaemic heart disease (e.g. retury liver, Fabry's disease, daucher's disease, diabetes disorders (e.g. fatty liver, Fabry's disease, Gaucher's disease, diabetes complitues, hyperlipidaemia, hypercholesterolaemia,, autoimmune disorders or inflammatory disorders (e.g. acquired immunodeficiency syndrome, anaemia, asthma or Crohn's disease, or prion diseases such as kuru or Creutzfeldt-Jakob disease), neurological disorders (e.g. epilepsy, dementia, Altheimer's disease, or prion diseases such as kuru or Creutzfeldt-Jakob disease) or cancers (e.g. adenocarcinoma, leukaemia, leukaemia, myeloma or sarcoma). They are also used in gene therapy and protein replacement therapy. The present sequence is human therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2733
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2904

This invention relates to novel human lipid-associated molecules (LIPAM)
and the DNA sequences which encode them. The invention may be useful for
the production of compounds with a neuroprotective, relaxant,
antithyroid, antidiabetic, cytostatic, dermatological, immunosuppressive,
antinflammatory, thyromimetic, antiallergic, cerebroprotective,
cartinflammatory, thyromimetic, antiallergic, cerebroprotective,
cartinflammatory, thyromimetic, antiallergic, cerebroprotective,
cartinflammatory, thyromimetic, antiallergic, cerebroprotective,
contropartion antibacterial, antiparasitic, fungicide, protozoacide,
contropic activity acting as LIPAM agonists or antagonists. In addition,
the disclosed sequences may be useful for gene therapy. The invention may
contropic activity acting as LIPAM agonists or antagonists. In addition,
the disclosed sequences may be useful for gene therapy. The invention may
contropic activity acting as LIPAM agonists or antagonists.
The disclosed sequences may be useful for gene therapy. The invention may
contropic activity acting as LIPAM agonists of LIPAM, such as
nuscular disorders (for example myotonic dystrophy, catatonia),
chiesase), muscular disorders (for example myotonic dystrophy, catatonia),
chiesample scleroderma, systemic lupus erythemanological disorders
(for example scleroderma, systemic lupus erythemanological disorders
(for example scleroderma, systemic lupus erythemanological disorders
(for example doodpasture's syndrome), infections (for example viral,
chacterial, fungal, parasitic, protozoal, helminthic), cardiovascular
disorders (for example atherosclerosis), or hepatic diseases (for example
compounds that specifically bind to and modulate the activity of LIPAM.
The polynucleotides can be used to create humanised animals or transgenic
compounds that specifically and conset humanised animals or transgenic
confounds. lipid-associated molecule (LIPAM) gene of the invention. õ . 2

The present invention relates to novel human lipid-associated molecules CC (LIPPAM) and polymucleotides encoding such proteins. Sequences of the invention are useful for treating diseases or conditions associated with invention are useful for treating a disease or condition associated with the overexpression of teneting a disease or condition associated with the overexpression of teneting a disease or condition associated with the overexpression of teneting a disease or condition associated with the overexpression of tenetional LIPPAM. They are useful for diagnosing, treating or preventing cradiovascular disorders (e.g. arteriovancus fistula, atherosclerosis, cardiovascular disease, aneurysms, varicose veins, congestive hypertension, Raymand's disease, aneurysms, varicose veins, congestive or rheumatic heart disease, gastrointestinal disorders (e.g. peptic or rheumatic hauty liver, Pabry's disease, Gaucher's disease diabetes disorders (e.g. fatty liver, Pabry's disease, Gaucher's disease diabetes con inflammatory disorders (e.g. acquired immunodeficiency syndrome, or inflammatory disorders (e.g. acquired immunodeficiency syndrome, con inflammatory disorders (e.g. acquired immunodeficiency syndrome, or inflammatory disorders (e.g. acquired immunodeficiency syndrome, con inflammatory disease), neurological disorders (e.g. stroke, epilepsy, dementia, Alzheimer's disease, or prion diseases used in gene con creatizeldt-Jakob disease) or cancers (e.g. adenocarcinoma, leukaemia, cherapy and protein replacement therapy. The present sequence is human therapy. The present sequence is human constraints.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2733
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       168

The invention may be useful for the development of compounds with a cytostatic, antiarteriosclerotic, anticonvulsant, nootropic, with a cytostatic, antiarteriosclerotic, antiallargic, nourcoprotective, cerebroprotective, anti-HV, antiallargic, notropic, antifilfammatory or thyromimetic activity or for gene therapy. The invention may therefore be useful in diagnosing, treating and preventing invention may therefore be useful in diagnosing, treating and preventing concerces conditions associated with the decreased expression or alterosclerosis), neurological (for example epilepsy, Huntington's atherosclerosis), neurological (for example epilepsy, Huntington's atherosclerosis), immune/inflammatory (for example syndrome) disorders convenient of the example Hypothyroidism, Cushing's syndrome) disorders or infections. These are also useful in assessing the effects of sequences of ENZM, the present sequence is that of a gene which encodes a constant of the expression of interior and amino acid the entry of the entr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2868

New NOVX polypeptides and nucleic acid molecules useful for preventing or treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis or diabetes, in chromosome mapping, tissue typing or in pharmacogenomics.

Claim 20; SEQ ID NO 983; 1503pp; English.

The invention relates to 566 new isolated human polypeptides and their encoding genes, sequences that are at least 95% identical to these or sequences comprising one or more conservative substitutions in these. The polypeptide, polymuclectide and antibodies against the polypeptides are useful in diagnosing, treating or preventing NoVX-associated disorders, e.g. cardiomyopathy, atherosclerosis, hypertension, cancer, obesity, alzheimer's disease, multiple sclerosis, graft-versus-host disease, Alzheimer's disease, parkinson's disease, asthma, or fertility disorders. The nucleic acids are further used as hybridization probes, in chromosome mapping, tissue typing, preventive medicione, and pharmacogenomics. The polypeptides are also useful as vaccines. This sequence represents an example of the nucleic acid sequence of the invention.

New NOVX polypeptides and nucleic acid molecules useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. cancer, diabetes, infection or obesity, and in chromosome mapping, tissue typing or pharmacogenomics.

P-PSDB; ADN61817.

ä

Claim 17; SEQ ID NO 85; 786pp; English.

The invention relates to an isolated polypeptide (designated NOVX, or NOV1-NOV127) comprising a sequence selected from 178 fully defined amino acid sequences (and their mature forms, variants and fragments). Also included are an isolated nucleic acid molecule encoding NOVX, a vector comprising the nucleic acid, a cell comprising the vector, methods for determining the presence or amount of the polypeptide or the nucleic acid molecule in a sample, methods for determining the presence of or predisposition to a disease associated with altered levels of expression of the above polypeptide or nucleic acid molecule in a first mammalian subject, a method for identifying an apent that binds to the above polypeptide or nucleic acid molecule in a first mammalian subject, a method for identifying an apent that binds to the above polypeptide or identifying a potential therapeutic agent for subject, a method for identifying a potential therapeutic agent for use in the treatment of a pathology that is related to aberrant expression or physiological interactions of the polypeptide and a method for modulating correcting for a modulator of activity or of latency or predisposition to a pathology associated with the polypeptide and a method for modulating are useful for diagnosing, preventing or treating diseases such as are useful for diagnosing, preventing or treating diseases such as cachexia, cancer, neurodegenerative disorders like Alzheimer's disease or parknison's disease, immune disorders, haematopoietic disorders, charmatomias, and other chronic diseases. These may also be used in chromosome mapping, tissue typing, preventive medicine and

New LIPAM polypeptides, useful for diagnosing, preventing, and treating disorders associated with abnormal expression or activity of LIPAM, e.g. neuromuscular, immunological, cardiovascular disorders, cancer and/or infections.

Claim 5; SEQ ID NO 31; 207pp; English

This invention relates to novel human lipid-associated molecules (LIPAM)
and the DNA sequences which encode them. The invention may be useful for
the production of compounds with a neuroprotective, relaxant,
antidiamatory, thyromimetic, dermatological, immunosuppressive,
antinflammatory, thyromimetic, antiallergic, cerebroprotective,
cartinflammatory, thyromimetic, antiallergic, cerebroprotective,
cartinflammatory, thyromimetic, antiallergic, cerebroprotective,
cartinflammatory, thyromimetic, antiallergic, fungicide, protozoacide,
cartinflammatory, antirheumatic, cardiant, cardiovascular, anti-HIV or
notropic activity acting as LIPAM agonists or antagonists. In addition,
the disclosed sequences may be useful for gene therapy. The invention may
be useful for diagnosing, preventing, and treating disorders associated
with an abnormal expression or activity of LIPAM, such as
cerebrated disorders (for example Parkinson's disease, Alzheimer's
disease), muscular disorders (for example myotonic dystrophy, catatonia),
catample leukaemia, cervical or breast cancers), immunological disorders
(for example scleroderma, systemic lupus erythematosus, allergies),
catample doodpasture's syndrome), infections (for example viral,
compounds that specifically bind to and modulate the activity of LIPAM.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2647
                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes novel human NOVX polypeptides which have cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABX97008-ABX97185 are cDNA fragments amplified and isolated by the PCR primers and probes represented in ABX13460-ABX13462 and ABX97186-ABX97193. ABX97108 encode the NOVX proteins described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   218

```
The invention relates to a novel human lippase (NHL, ABB09555, ABB09556)

CC and to nucleic acids encoding it (ABD77623, The NHL has

CC structural similarity with animal lippases, particularly phospholipase B.

cc structural similarity with animal lippases, particularly phospholipase B.

cc structural similarity with animal lippases, particularly phospholipase B.

cc in conjunction with human thyroid and brain cDNAs. The NHL gene is

in conjunction with human thyroid and brain cDNAs. The NHL gene is

cc in conjunction with human thyroid and brain cDNAs. The NHL gene is

co the open reading frame (ORF), resulting in an Ala/Val substitution at

cc of the open reading frame (ORF), resulting in an Ala/Val substitution at

cc treating disorders such as inflammatory or proliferative disease,

cr in screening for compounds useful in the treatment of mental, biological

cc infectious disease, clotting disorders, and cancer. They can also be used

in screening for compounds useful in the treatment of mental, biological

cc medical disorders, as diagnostic reagents, in clinical trial

cc medical disorders, and mutriceutical applications. NHL

monitoring and in cosmetic and mutriceutical applications of disease-

cc cucleotides can additionally be used in the detection of disease-

cc cucleotides can additionally be used in the detection of disease-

cc recombinant expression of NHL, to generate transgenic animals, in gene

cr charapy, and as part of ribozyme and/or triple helix sequences useful in

cc therapy, and as part of ribozyme and/or triple helix sequence represents

cc cDNA encoding the Ala 1318 variant of NHL

The invention relates to a novel human lipase (NHL; ABB09555, ABB09556)
and to nucleic acids encoding it (ABQ77623, ABQ77624). The NHL has
extructural similarity with animal lipases, particularly phospholipase B.
Polymucleotides encoding NHL were obtained using human genomic sequences
in conjunction with human thyroid and brain cDNAs. The NHL gene is
coated on chromosome 2, and contains a C/T polymorphism at position 3953
of the open reading frame (ORF), resulting in an Ala/Val substitution at
position 1318 in the protein. NHL nucleotides and proteins are useful for
treating disorders such as inflammatory or proliferative disease,
infectious disease, clotting disorders, and cancer. They can also be used
in screening for compounds useful in the treatment of mental, biological
or medical disorders, as diagnostic reagents, in clinical trial
continuing and in cosmetic and nutriceutical applications. NHL
conitoring and additionally be used in the detection of disease.
cuclectides can additionally be used in the detection of disease.

recombinant expression of NHL, to generate transgenic animals, in gene therapy, and as part of ribozyme and/or triple helix sequences useful in the modulation of NHL gene expression. The present sequence represents cDNA encoding the Val 1318 variant of NHL. Note: The present sequence is not shown in the specification, but was derived from the the information given on page 18 and the Ala 1318 NHL-encoding cDNA (ABQ77623) given in the sequence listing
                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 <u>Accorracciccirique representation de la consecue d</u>

The present invention relates to novel human phospholipase-like enzymes and polymucleotides encoding such proteins. Sequences of the invention are useful for producing a medicament for modulating the activity of phospholipase in a disease such as cancer, inflammation, cardiovascular bhospholipase in a disease such as cancer, inflammation, cardiovascular diseases, chronic obstructive pulmonary disease, certical a disease, dementia (Alzheimer's disease), Parkinson's disease, corticobasal degeneration, motor neuron disease, Pick's disease, Corticobasal degeneration, associated with CNS (e.g. epilepsy, failed back surgery syndrome, castica), multiple sclerosis, stroke, age associated memory impairment, allergic disease including asthma, allergic rhinitis (hay fever), atopic dermatitis, anaphylaxis and inflammation, cardiovascular disease, chronic obstructive pulmonary disease, acute respiratory distress syndrome, gout, cartery disease, hyperlipidaemia, appetension, type-II diabetes, coronary artery disease, hyperlipidaemia, agal bladder disease, prostate, colon cancer), thrombolytic disease, reduced fartility, polycystic ovarian syndrome, complications of pregnancy, menstrual irregularity, human the present sequence is numan phospholipase like enzyme encoding cDNA

treating NOVX polypeptides and polynucleotides, useful for preventing or trea a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial asthma.

P-PSDB; ABU65081

Claim 13; Page 167-168; 1103pp; English

cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABX9708-ABX97185 are CDNA fragments amplified and isolated by the PCR primers and probes represented in ABX13460-ABX13462 and ABX97186-ABX97593. ABX97108-ABX97185 encode the NOVX proteins described in This invention describes novel human NOVX polypeptides which have ABU65041-ABU65218

Sequence 4268 BP; 1039 A; 1209 C; 1119 G; 901 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to 566 new isolated human polypeptides and their encoding genes, sequences that are at least 95% identical to these or sequences comprising one or more conservative substitutions in these. The polypeptide of particular conservative substitutions in these. The polypeptide and antibodies against the polypeptides are useful in diagnosing, treating or preventing NoVX-associated disorders, e.g. cardiomyopathy, atherosolerosis, hypertension, cancer, obesity, diabetes, ADS, multiple sclerosis, graft-versus-host disease, Alzheimer's disease, parkinson's disease, asthma, or fertility disorders. The nucleic acids are further used as hybridization probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The example of the nucleic acid sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                  Burgess CE, Casman SJ, Catterton E, Dhanabal W, Edinger SF, Burgess CE, Casman SJ, Catterton E, Dhanabal W, Edinger SF, Bilerman K, Ettenberg S, Gangolli EA, Gardacha VL, Gorman L, Grose WM, Guther E, Guo X, Gusev VY, Herrmann JL, Ji W, Kekuda R; Khramtsov NV, Larochelle WJ, Li L, Liang H, Low K, Macdougall JR; Maclachlan T, Malyanker UM, Moquener K, Mezick AJ, Miller CE; Millet I, Padigaru M, Payman JA, Qian X, Rastelli L; Rieger DK, Rothenberg ME, Shenoy SG, Shimkets RA, Smithson G; Spytek KA, Stone DJ, Sukumaran S, Szekeres ES, Vernet CAM, Voss EZ; Wolenc AR, Zhong M, Zhong H;

```

The invention relates to an isolated polypeptide (designated NOVX, or CC NOV1-NOV127) comprising a sequence selected from 178 fully defined amino acid sequences (and their mature forms, variants and fragments). Also acid sequences (and their mature forms, variants and fragments). Also caid sequences (and their mature forms, variants and fragments). Also comprising the nucleic acid molecule encoding NOVX, a vector included are an isolated nucleic acid determining the presence or the nucleic acid determining the presence of or molecule in a sample, methods for determining the presence of or predisposition to a disease associated with altered levels of expression of the above polypeptide or nucleic acid molecule in a first mammalian of the above polypeptide, a method for identifying an agent that binds to the above collappetide, a method for identifying a potential therapeutic agent for polypeptide, a method of activity or of latency or predisposition to screening for a modulator of activity or of latency or predisposition to screening for a modulator of activity or of latency or predisposition and method of a pathology associated with the polypeptide and a method for modulating a pathology associated with the polypeptide and a method for modulator of activity or of latency or predisposition and method of a pathology associated with the polypeptide and a method for modulator of activity or of latency or predisposition and method of a pathology associated with the polypeptide and a method for modulator of activity or of activity or of the polypeptide cited above. The composition and method disposes, namenced disposesses and namenced disposesses and namenced dis New NOVX polypeptides and nucleic acid molecules useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. cancer, diabetes, infection or obesity, and in chromosome mapping, tissue typing or Ë Spytek KA, Shenoy SG, Taupier RJ, Pena CEA, Li I Gusev VY, Ji W, Gorman L, Miller CE, Kekuda R; Gangolli EA, Vernet CAM, Guo XS, Tchernev VT; Casman SJ, Malaymkar UW, Gerlach V, Liu Y; Spaderna SK, Catterton E, Leite MW, Zhong H; Lepley DM, Rieger DK, Burgess CE; Sequence 4268 BP; 1039 A; 1214 C; 1114 G; 901 T; 0 U; 0 Other; Claim 17; SEQ ID NO 81; 786pp; English.
